

HAND CONTROLS

VEIGEL MY COMMAND

HAND CONTROLS VEIGEL MY COMMAND

The **My Command** is an ergonomic steering device used to control not only the steering but all the auxiliary functions required to operate the vehicle. With up to 14 functions available, you can tailor the functions to suit your driving needs.

This device is used to assist with driving when someone requires hand controls for brake and acceleration or if someone is experiencing difficulty in one of their upper limbs for steering. The handle is designed in a way to stay with the driver when turning the steering wheel, so it will not flop up or down if you remove your hand off the **My Command**.

Veigel's **My Command** is a great solution that blends in with the vehicle interior and provides a safe outcome for drivers requiring assistance with the steering of the vehicle.
